SUMMARY

B.Sc. (Hons) Computer Science graduate, Hansraj College, University of Delhi (CGPA: 8.015). Strong foundation in data structures, algorithms, and system design, applied across production backend systems — distributed async pipelines, partitioned relational schemas, and fault-tolerant API services. Experienced with Docker-based infrastructure, message queues, and multi-tiered service architecture. Solved 300+ DSA problems (Arrays, Trees, Graphs, DP). Led a 6-engineer team at Smart India Hackathon 2025 delivering a production system under time constraints. Seeking SDE-1 roles where strong CS fundamentals drive scalable, reliable systems.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, C++
CS Fundamentals	Data Structures, Algorithms, OOP, System Design, Complexity Analysis
Backend & APIs	FastAPI, Node.js/Express, REST API Design, Celery, Redis (message queues), JWT Auth, Zod, SSE
Databases	PostgreSQL (partitioning, pg_cron, BRIN indexing, pgvector), MySQL, Supabase, Prisma ORM
Tools & Practices	Docker, Git, GitHub Actions (CI/CD), AI-Assisted Development (Claude Code), Vercel, Railway, Agile, Debugging & Root-Cause Analysis

PROJECTS

EvalOps — Distributed LLM Evaluation Infrastructure

Python, FastAPI, Celery, Redis, PostgreSQL, Docker, React, Node.js github.com/Anshu-AK-beep/evalops

- Architected an async, queue-based evaluation pipeline (FastAPI + Celery/Redis, dedicated priority queues) decoupling request handling from long-running processing — cut API response latency from ~5s (blocking) to near-instant; shipped as a fully containerized, one-command self-host (6-service Docker Compose stack).
- Designed a partitioned, BRIN-indexed PostgreSQL time-series schema with composite foreign keys across partitions and pg_cron-automated maintenance; built statistically-grounded drift detection (minimum-sample-size, z-score-based) to guard against false-positive alerts at scale.
- Built a CI/CD quality gate (GitHub Actions) comparing deployments against a snapshotted baseline, with pgvector-embedding-deduplicated auto-growth of the regression test suite; shipped two client SDKs (Python, zero-dependency Node.js) validated at 87.5% agreement with human judgment.

ThinkMate — Real-Time Multi-Tiered Learning System

React, TypeScript, Node.js/Express, Supabase (PostgreSQL), JWT, SSE / AI for Bharat Hackathon

github.com/Anshu-AK-beep/thinkmate

- Implemented JWT authentication with Supabase Row-Level Security for per-user data isolation, and Zod-validated API contracts across all endpoints ensuring type-safe, maintainable request handling.
- Integrated real-time SSE streaming for distributed responses; debugged a multi-layer latency issue through the middleware stack, reducing response times to sub-200ms.

KrishiSaathi — Full-Stack Distributed Farming Platform

Next.js, TypeScript, PostgreSQL, Prisma ORM, Vercel, GitHub Actions github.com/Anshu-AK-beep/KrishiSaathi

- Designed a multi-tiered REST API architecture delivering AI crop-yield predictions and weather-based recommendations; implemented a relational schema via Prisma ORM with Clerk-based authentication, deployed on Vercel with CI/CD.
- Engineered a fault-tolerant data pipeline over 10,000+ soil/weather records with input-validated API contracts and authentication middleware for end-to-end request lifecycle management.

EXPERIENCE & HACKATHONS

Team Leader — Smart India Hackathon (SIH) 2025

2025

Hansraj College, University of Delhi

- Led a 6-member cross-disciplinary team across 3 parallel modules (ML pipeline, optimization logic, REST API service) using Agile sprint planning under time-constrained conditions; solution evolved into KrishiSaathi (deployed, live).

EDUCATION

Hansraj College, University of Delhi

2023 – 2026

B.Sc. (Hons) Computer Science | CGPA: 8.015 / 10

CERTIFICATIONS & ACTIVITIES

- DSA — 300+ problems solved (Arrays, Trees, Graphs, DP) | leetcode.com/u/Anshu-AK-beep
- Commonwealth Bank Data Science Job Simulation (Forage, Feb 2026)
